

Introducing Neon+™

Neon+™ is the first Made-in-the-USA alternative for LED Neon signs.

LED Neon signs have long been the popular choice for on/off trade signage, however there's no option to source them in the USA. So, we decided to challenge our design team to come up with a viable domestically made alternative. We didn't stop there we wanted to make it better than LED Neon, so we gave them three criteria:

1. Give it more design options.
2. Give it more color options.
3. Make it made-in-the-USA.

What they engineered is truly remarkable. We call it Neon+™ and it's a game changer for on and off trade signage. Neon+™ is truly next generation LED signage. It offers a sleek compact design, superior brightness, provides more color options, and 10x the design possibilities versus traditional LED neon signs.

Because its Made-in-the-USA, you get lead-times measured in weeks not months, lower minimum order quantities, and an all around superior sign at a lower cost. We're excited to share all the possibilities that Neon+™ offers.

Get in touch and let's get started on a project.

The Neon+™ difference.

More Color Options

Unlike LED Neon, Neon+™ not only provides an unlimited range of color options, but also superior color accuracy.

Better Font Options

No more chopped up fonts, Neon+™ gives you more font options to help you stay true to brand.

ABCDEFGHIJK

More Design Possibilities

Unlike LED Neon, you're not limited to tube-like shapes with single color illumination. Neon+™ allows you to illuminate any shape in any color. Even better, you can also illuminate shapes or tubes with colored patterns or gradients.

Proudly Made-in-the-USA

Neon+™ is the first American made commercially available premium sign option in the marketplace.
